

Compare to your favorite fitting shirt:

Follow 3 Easy Steps and Get the Right Size!

1. Measure a favorite fitting T-shirt one inch below the armpits while it lays flat on a table. Use a measuring tape or a yard stick.

2. Go to the attached Size Chart below and look for the row titled "Chest".

3. Find the closest to your shirt's measurement, and choose that size. If you are in between, go bigger.

*** In all cases we recommend your staff/group check their size by doing the 3 step process described at the left of this attachment.**

1. The columns far left and far right are the same, they describe the shirt style (gender). You will notice there are no hooded T or crew neck for ladies, see step 3. Mens do not have XS and 5XL in all styles. Youth Does not have XL in the Hooded T (move to Mens Small).

2. In general the ladies V-neck fit small, our clients say – so please measure!

3. If a lady is trying to find her size in a hood, she can look vertically down the column and compare it to mens or youth. The mens will have a longer sleeve than the youth, so if she is really petite, I would recommend the youth. If the lady wants a crew neck for sun protection, I would recommend this same process to choose the right size from Mens or Youth.

4. The ladies LS and SS V-neck go really small to accommodate girls youth.
